CAYMAN
Wire Processing Software

SOFTWARE

CAYMAN

Introduction

CAYMAN is the PC based Wire Processing Software package for Schleuniger cut & strip machines with indexing cutter head. The graphical user interface with its intuitive menu structure is ideal for fast and efficient programming of individual wires or entire wire lists. To minimize machine downtime when programming, CAYMAN can be installed on a separate PC to allow offline programming while the machine is in production. Wire lists produced offline can be easily transferred over a network or via a USB memory stick to a PC connected to the wire processing machine.

As an extension to the wire processing software CAYMAN, the CAYMAN Toolbox Basic and ERP are available. The Toolbox contains various utilities that extend the CAYMAN functionality.

The CAYMAN Device Connector is an extension to the wire processing software CAYMAN and enables print data from a cable program to be sent directly to a wire marking device. Existing wire programs in CAYMAN can be used for the wire marking devices with little adaptation.

Special Features

- Libraries for raw material and processing allow global editing of programs which use the same raw material, saving valuable programming time
- Save time with predefined processing templates for a variety of wire processing operations, such as end stripping, window stripping, slitting, combing, marking, etc.
- Operator support / programming support with clearly structured screen layout and WYSIWYG graphic illustration of programmed wires
- Software assistant (wizard) for programming new libraries or adding new entries to existing libraries
- Different user levels for production, programming and administration
- Software interface for integration of custom software applications

System Requirements	
Operating System	Schleuniger recommends to apply to the Windows 10 requirements.
CPU	1 Gigahertz (GHz) or faster or SoC
RAM	1 GB for 32-bit or 2 GB for 64-bit
Hard Disk	16 GB for 32-bit OS or 20 GB for 64-bit OS
Graphics Card	DirectX 9 or later with WDDM 1.0 driver
Ethernet Interface	for EcoStrip 9380, MultiStrip 9480, PowerStrip 9580, MegaStrip 9680

To Be Precise.
